

[View this email in your browser](#)

Hey there,

This week, we start [Module 3 on Data Warehousing and BigQuery](#).

We remind you that the deadline for [Homework 2](#) is in less than 24 hours.

We're finalizing Homework 3 and will notify you when it's ready.

We Start Module 3

- In Module 3, you'll learn about:
- Data warehouse fundamentals and BigQuery basics
 - Query performance and internals (partitioning, clustering, best practices)
 - Machine learning in BigQuery, including SQL for ML
 - Deploying models from BigQuery using Docker

Self-Paced vs. Live Cohort

All Zoomcamp lectures and materials are pre-recorded, regardless of how you take the course. There are no mandatory live classes.

The difference between self-paced and live cohort is about submissions and certification, not about videos.

In self-paced mode, you can watch all lectures, read the documentation, and follow the course at your own pace, but you cannot submit homework, projects, or receive a certificate.

In the live cohort, the same materials are used, but homework deadlines are active, submission forms are open, peer review is enabled for the final project, and a certificate is available if you meet the requirements.

If you want to submit homework, complete the final project, and earn a certificate, you need to participate in the live cohort.

Homework

Homework 1: Docker, SQL and Terraform	27 January 2026 02:59	Open
Homework 2: Workflow Orchestration	3 February 2026 02:59	Closed
Homework 3: Data Warehousing	10 February 2026 02:59	Closed
Homework 4: Analytics Engineering	17 February 2026 02:59	Closed
Homework 5: Data Platforms	1 March 2026 02:59	Closed
Workshop 1: Ingestion with dlt	3 March 2026 02:59	Closed
Homework 6: Batch	10 March 2026 02:59	Closed
Homework 7: Streaming	17 March 2026 02:59	Closed

Projects

Project Attempt 1	31 March 2026 02:59	Closed
Project Attempt 2	21 April 2026 02:59	Closed

All deadlines are in your local timezone

During the live cohort, we recommend progressing at about one module per week. Deadlines are fixed and published in advance. You are free to move

faster or slower, but submissions must be made before the deadlines.

The full schedule and all deadlines are available on the [course management platform](#).

Where to Find Materials

All course materials live on [GitHub](#).

Lectures are published on YouTube and linked from GitHub. The [main playlist](#) contains all lectures, while the [2026 playlist](#) includes only cohort-specific or updated videos.

Homework and Submission Process

The deadline for this homework is 10 February 2026, 12 AM CET.

Each module in the live cohort includes a homework assignment designed to help you apply the concepts from the lectures in practice.

For a homework, you are expected to:

- Work through the tasks locally on your machine
- Use code, SQL queries, Docker, Terraform, or other tools introduced in the module
- Validate your results yourself before submitting

The homework itself is hosted on the [course platform](#) and requires you to log in.

To submit a homework:

- You log in to the course platform
- You answer the multiple-choice questions directly in the homework form
- For questions that require code or analysis, you publish your solution in a public GitHub repository (or similar) and submit the link in the form

Each homework has a fixed deadline. After the deadline passes, the submission form closes automatically, and late submissions are not accepted.

Homework submissions are:

- Only available during the live cohort
- Automatically graded
- Count toward the leaderboard (optional)

In self-paced mode, you can still complete the homework for practice, but you will not be able to submit it or receive credit.

[Submit Your Homework Here →](#)

Got stuck while starting the homework?

Having questions is a normal part of the learning process.

Here's what to do:

1. [Check the FAQ](#)
2. Check Canvas on Slack ([canvas 1](#), [canvas 2](#))
3. Check this [pinned message](#)
4. Check these [docs](#)
5. Watch the [launch stream recording](#)
6. If you don't find an answer to your question in the FAQ, ask it on the **DE Zoomcamp Slack channel**. We will update the FAQ with answers.

💡 Pro Tips

- Expect to spend about **10-12 hours on this module** if you're a beginner, including the materials and the homework assignment.
- **Break it into smaller chunks**, don't wait until the last day.

Hundreds of learners are starting this module alongside you. Be sure to collaborate and share knowledge.

🔗 Quick Links

- Check [the course repository](#) on GitHub and star it. All the materials are stored in this repo.
- Subscribe to [DataTalks.Club's YouTube channel](#) and check the [main playlist](#) that contains all lectures, and the [2026 playlist](#) that includes only cohort-specific or updated videos.
- Check the [FAQ](#) for the list of frequently asked questions.
- Join the [Slack](#) course channel for discussions and the [Telegram channel](#) for announcements.
- Check the [course platform](#) for deadlines and open submissions.

You've Got This!

This is **Module 3 of 6**: completing the homework brings you one step closer to earning your final certificate.

It's okay if you don't get everything right away; most students don't.

Every attempt gets you closer to mastering data engineering.

Good luck with learning!
